Height: 6 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 4

Group/Class: Climbing Rose

Description:

This fast growing, vigorous plant bears an abundance of fully double coral-pink blooms with yellow eyes throughout the season; moderately fragrant and good disease resistance; a stunning addition to the garden or arbors; reblooms throughout season

Ornamental Features

Fruity Petals Rose features showy clusters of lightly-scented fully double coral-pink flowers with yellow eyes along the branches from mid spring to early fall. The flowers are excellent for cutting. It has dark green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Fruity Petals Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Fruity Petals Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

WALLACE'S GARDEN CENTER

Planting & Growing

Fruity Petals Rose will grow to be about 6 feet tall at maturity, with a spread of 3 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
